ScaleWatcher (SW) Water Treatment Report, 29th May 2018

Objective

OperaKool team is aiming to provide solution on the challenges concerning the corrosion and scaling problems by Lazer Carwash Co.

Car wash are typically uses water applications which is accompanied with challenges that causes so much expenses. This water application problems that are faced in Main Service and Accommodation line are usually:

- Scaling and corrosion affecting the whole system of the water application unit.
- Algae and bacterial challenges resulting to fouling of odour of the water.
- Increased power usage due to variable water parameters affecting the system.
- High maintenance which is an additional operational expenses such as replacement and maintenance shutdown of the heating element and the whole heater unit , periodic cleaning and application of chemical antiscalants for other water applications.

The problems stated above are the main concern and objectives, this report shows how our team was able to solve them.

Overview

- Installations of SW Commercial Model in the inlet 1" pipe of Main Municipal Line for accommodation was on March 10, 2018.
- Initial status of some critical areas in the Accommodation line were Heaters and Tanks as noted:
 - *Hard corrosion and scaling were present and affecting the said water applications.

OperaKool recommended a 100% non-usage of chemical water treatment upon full installation of the SW units in order to prove that it is a perfect alternative for the current water treatment implemented by Lazer Maintenance team.

Before & After results of SW on Heater after a month of installation

Before treatment

Inside of heater covered with scaling and corrosion deposits
(9th March 2018)

After treatment

Inside of heater is clean and doesn't contain any deposits
(24th May 2018)

Before treatment

Inside of heater covered with scaling and corrosion deposits

(9th March 2018)

After treatment

Inside of heater is clean and doesn't contain any deposits

(24th May 2018)

Before treatment
Heating Element covered with
scaling and corrosion deposits
(9th March 2018)

After treatment
Heating Element is clean and
doesn't contain any deposits
(24th May 2018)

Tanks got as clean as brand new from inside

Operqkool
ENVIRONMENTAL CONTROLLERS

Observations:

- Hard corrosion and scaling that has developed through time in the Accommodation line affecting heater and tanks has significantly soften and reduced.
- The maintenance team is no longer required to bring the heavy chemicals for water softening to the heater.
- There is no rely of any chemicals and time needed to wash the heater with chemicals and to scrub it for long to remove corrosion or scale of minerals.
- The SW treatment has really worked on the Main line from Municipality to Accommodation without the usage of chemicals.

Client Benefits

- Adds value to the operation by using eco friendly water treatment to better water quality which is used for washing vehicles. it can be marketed showing that the water used for washing vehicles is well processed
- Increasing life all the water application equipment to gain maximum efficiency with better performances for long period of time.
- Since the water molecules after being treated by Scalewatcher are no more hard and harsh so on high pressure they don't damage the vehicle body and vehicle paint.
- pH of water is stabilized by Scalewatcher, making it neutral and in no more acidic or basic. That means this well treated water doesn't damage Vehicles polish and paint.

Conclusion

- Providing an effective water treatment will ensure a significant reduction of maintenance expenses, lesser maintenance shutdown of high invested units with longer performance period and minimal concerns on water parameters affecting any system or application.
- Achieving these results will positively increase the revenue of the company.
- In order to achieve and maintain the ideal water parameters with a minimal expenses, we are proposing to install an Electronic Water Treatment (EWT) - ScaleWatcher to have a 24/7 water treatment.
- ScaleWatcher is a patented technology from The Netherlands proven to provide solutions to various problems associated with water.
- It is a maintenance free, non-invasive and eco-friendly water solution that guarantees to eliminate scaling, corrosion, biofilm causing the fouling of odour and significantly lower the maintenance expenses for Lazer.

Recommendations:

- Secure a 24/7 electrical power connection for the SW Electronic Water Treatment System.
- Monitor the status of the chiller and check the inner surfaces of the system and compare to the records of expenses before the SW was installed.
- Check the status of the progress of conversion the red rust and the intensity of water leaking. This will heal through time by converting the red rust into its beneficial form- “Black Magnetite”.
- Installation of SW Commercial and Industrial Models for the inlet water line of main storage tank, RO system, washing machine, steamers, chillers, pumps, swimming pool and spa area to significantly reduce maintenance expenses and provide protection to extend functionality of the said high-value equipment.

ScaleWatcher(SW) Guaranteed Product Benefits:

- 24/7 water pH stability ensuring no scaling, corrosion, biofilm and algae to develop in the water; meaning a healthy water source for the users.
- Removes old scale layers and prevents further build-up of new scales.
- Improves cleaning properties of water resulting to lesser amount used resulting to savings for the company.
- Reduces or prevents algae and bacterial growth in the water line (ex. Legionella).
- Eliminates and reduces corrosion and removes rust and replaces it with a black layer called Black Magnetite.
- Zero usage of water softener and other chemical treatments (ex. Broxo Salt).
- No chemicals for descaling.
- No expensive maintenance, non-invasive system and guaranteed environmentally friendly.
- Guaranteed protection of pipeline with lesser maintenance costs and shutdown.
- Prolonged shelf life of existing system or high invested system such as water pumps, filtration and pipelines.
- Increased water pressure in the pipelines and higher water yield for the RO system.
- Cleaner status of drinking glasses, plates and cutlery with no undesirable water markings resulting to its longer usage of the company as compared before the installation of ScaleWatcher.

Benefits

—ScaleWatcher will Save

- Money
- Energy
- Water
- Time
- Safe and Environmentally Friendly

Quality Assurance on SW Mode of Action- Health Declaration Assurance Aligned to EU Standards

Health Declaration

Most natural water contains calcium and carbonate ions that form – depending on temperature and other conditions – several crystal structures like calcite and aragonite. Calcite is essential for the human body – so it should remain in the water. But it should not remain in the pipe, as this would increase maintenance costs.

Scalewatcher treatment follows this rule: It does not remove any calcium components from the water, but influences crystal formation. Calcium and Carbonate ions no longer form particles with matted structures, but smaller crystals with a rounded shape. These will no longer adhere to the pipe walls, but are flushed through the pipe by the flow of water.

The Scalewatcher electronic hard water treatment system operates with a signal cable, wound around the pipe work. It emits a weak magnetic and electric field around the inside and outside of the pipe work which affects the calcium molecule formation.

The Scalewatcher system neither adds nor removes anything from the water and there is no physical contact. **So the water quality is not changed by the Scalewatcher. It has no adverse effect on health and can be consumed in the normal way.** In the stomach, the Ca-related content is dissolved by the acidity and available for the human metabolism.

Since 1989 over 300,000 units have been sold worldwide for residential use. There has never been any suspicion that related a Scalewatcher system to health problems of consumers nor has there been any reference to health problems associated with the product from any organization either government or consumer.

Good drinking water is rare and expensive. So SW treatment will not change water quality, but will protect pipes and water related equipment and reduce maintenance costs. That's what the SW is made for.

The World Green Building Council specifies only NON-CHEMICAL water treatment such as the FMW/SW, currently registered with the US and UK Green Building Councils.

Recommendation for Scale Watcher

Fraser Suites Seef Bahrain is a fantastic 5-star luxury hotel ideally situated next to the Al Seef Mall. Located in the heart of Al Seef's financial and business centre, this excellent hotel offers superb accommodation in a central location for valued guests.

Providing a well maintained amenities such as the swimming pool as well as the shower area with good quality house water is a daily routine closely monitored by our Maintenance Team.

It is a monthly exhausting routine to us to bring the chemical softener on the 20th floor to regularly treat the main water tank that ensures the normal water supply of our hotel. Another perennial challenge that we encounter is the regular replacement of heating elements situated in each floor of our hotel and the scaling and corrosion that greatly affecting our pipelines and medium size RO unit.

Our challenge to overcome this water related problems was impressively solved when we tried ScaleWatcher which was introduced to us by OperaKool. There were 3 units of the said Electronic Water Treatment(EWT) were installed in our main water tank as well as to inlet pipe to our RO unit. ScaleWatcher models of IE8(after main water tank), IE4(before main water tank), and CM2(inlet pipe before RO) has clearly demonstrated to us very convincing results for the next 60 days after installation.

The cost of the 3 installed units mentioned was relatively very economical to our company as compared to the total costs of the usual water treatment expenses for the next 5 years which is approximately 40% cheaper excluding the expenses of the water heater replacement.

The usual problems and chemical water treatment is no longer being observed which is a very strong indication that this EWT is perfect alternative maintenance free solution. We noticed a significant improvement on the water pressure specially in the 7th floor where some pipe problems has been noted before installation as well as in the shower areas of each room in each floor.

This testimonial is hereby issued to support our satisfaction on the performance of ScaleWatcher.

Yours truly,

Michael Datan

RECOMMENDATION FOR SCALEWATCHER

Adhari Park is the kingdom's largest indoor and outdoor amusement park covering a total of 165,000 square meters, consisting of various built up areas, green areas along with 3 outdoor lakes.

Ever since the park began its operations in April 2008, maintaining these lakes has been a huge challenge as we had to use large quantities of chlorine and other chemicals to ensure the water remains clean and bacteria free. Unfortunately because of the increased chlorine and chemical levels the water was hazardous for our visitors.

After extensive research and searching the local market we came across Mr. Ali and he offered us a simple solution by the name of "Scalewatcher" which he said would make all our water worries go away, being highly skeptical of his claims the management decided to invest in one unit for testing purposes and to our surprise the effects were visible within a week.

The water was much cleaner, there were no algae or bacteria floating in the water and our cost of chlorine became zero. Looking at this we decided the management decided to invest in two more units and it has been over four years now and we have not had any issues with the units and in the process increasing the longevity of our pushback systems.

Not to mention excellent after sales service and support offered by Mr. Ali and his organization "Opera Kool Trading".

We recommend "Scalewatcher" to everyone and like us you can conduct your own research online to compare and help you make your decision.

Sincerely,

Khayam Ali Salem

Dear Jeff,

I would like to inform you as to how we are getting on with our trial of your scale watcher system on our bottle washers.

As you know we were experiencing condensation and water droplets on the glass leaving the bottle washer which was giving us high false rejects on our dairy scan bottle scanners.

I suggested that the problem could be caused by water hardness in our washer in the area of 20 - 30 ppm.

Having installed the scale watcher the problem has completely disappeared. While I am very happy with this inexpensive and simple way of overcoming our problem I still have to confirm my trial is complete by turning the system off and monitoring the return of the problem.

In the meantime many thanks for your support and I will keep you informed as and when I have some final results to report.

Yours sincerely

M. R. Allen

RECOMMENDATION FOR SCALEWATCHER

Gulf Air club is a part of Gulf Air company engaged in promoting leisure and recreational facilities to Gulf Air Staff and their families. After initial success of operations these facilities were extended to general public so that they could take advantage of the facilities offered by our company.

Amongst other facilities, we have 3 swimming pools – one which is semi-Olympic in size for Mix gender and the remaining two are exclusively for Ladies. For the past several years, it is the struggle of our maintenance crew to properly maintain our swimming pools. The company's maintenance expenses is a significant budget that really burdens our operational expenses. In addition to this concern is the scaling that we observed not only in some area of our swimming pools but also to the water tanks that we have in the area.

This is a concern that our team seek to have other alternatives to address the problem. Our company was introduced to OperKool which is providing EWT solution to our problem. The basic and simple approach of Scale Watcher to treat water was clearly explained with the support of shared experiences of satisfied customers of the said application.

After careful assessment of pros & cons of the instrument, we have decided to install one unit of IE-8 model for trial basis and within a week's time of installation, we noticed visible changes on the quality of water compared to the past. Scaling in some area in the swimming pool as well as the water tank were gradually reduced and our expenses for chlorine and acid treatment has significantly improved by 25%. Having satisfied with the improvements. The company is planning an additional 2 units to serve the same purpose that we have in our first installation since our problem for high maintenance, scaling concerns and even the not so clear water quality with intense chlorine odor was really improved with satisfaction by ScaleWatcher.

Sincerely,

Adban Al Khadem

Date : August 12, 2004
To : Mr. Mousab Mousa
Subject : Approval Scalewatcher in Steamer

Dear Mousa,

It's my pleasure to inform you about your Scalewatcher unit which you have installed on 17th of May 2004. Our technical engineer had noticed the performance of this unit after 1 week of the installation.

The Scale around nozzles in the steam room became very soft and was easy to remove than before. Also we didn't suffer from this scale anymore because of the effect of Scalewater.

Moreover is no any chemical treatment needed from now to keep nozzles clean and open. The maintenance of the steamer in the steam piping is also reduced. In short, the unit is perfect.

I hope you hereby sufficiently have been informed.

Sincerely yours,

Khalil Khamiri
