RECOMMENDATION FOR SCALEWATCHER

Gulf Air club is a part of Gulf Air company engaged in promoting leisure and recreational facilities to Gulf Air Staff and their families. After initial success of operations these facilities were extended to general public so that they could take advantage of the facilities offered by our company.

Amongst other facilities, we have 3 swimming pools – one which is semi-Olympic in size for Mix gender and the remaining two are exclusively for Ladies. For the past several years, it is the struggle of our maintenance crew to properly maintain our swimming pools. The company's maintenance expenses is a significant budget that really burdens our operational expenses. In addition to this concern is the scaling that we observed not only in some area of our swimming pools but also to the water tanks that we have in the area.

This is a concern that our team seek to have other alternatives to address the problem. Our company was introduced to OperKool which is providing EWT solution to our problem. The basic and simple approach of Scale Watcher to treat water was clearly explained with the support of shared experiences of satisfied customers of the said application.

After careful assessment of pros & cons of the instrument, we have decided to install one unit of IE-8 model for trial basis and within a week's time of installation, we noticed visible changes on the quality of water compared to the past. Scaling in some area in the swimming pool as well as the water tank were gradually reduced and our expenses for chlorine and acid treatment has significantly improved by 25%. Having satisfied with the improvements. The company is planning an additional 2 units to serve the same purpose that we have in our first installation since our problem for high maintenance, scaling concerns and even the not so clear water quality withy intense chlorine odor was really improved with satisfaction by ScaleWatcher.

Sincerely,

Adnan Al Khadem
Senior Supervisor Recreation & Maintenance
Gulf Air Club
